

AWAAZ — Demo Video Script

Hacker House Goa 2026 · Task 2 · Single narrator: Sahil · Screen-recording driven · 90 seconds

Cast & Format

Element	Detail	
Narrator	Sahil (voice-over, deadpan energy)	
Visuals	Screen recordings of the live demo at https://archfev.tailfcb4d3.ts.net/awaaz/ (or 127.0.0.1:7860)	
Format	One continuous screen capture with VO — cut only for the guardrail and telemetry close-ups	
Subtitles	On (Indic queries benefit)	
Runtime	~90s	

Scene 1 — HOOK (0:00–0:08)

Visual

The AWAAZ landing page loads. Camera zooms into the आवाज़ wordmark.

Lines

Sahil (VO): "This is AWAAZ. Voice in, answer out — in under 200 milliseconds. Let's skip the talking and show you."

B-roll

- Landing page → click CTA → copy link → funnel UI opens

Scene 2 — VOICE IN, ANSWER OUT (0:08–0:26)

Visual

The demo UI. Click ● Record, speak in English: "What is retrieval augmented generation?"

Lines

Sahil (VO): "Press record, ask a question — audio goes to Sarvam Saaras for transcription, then straight into the retrieval pipeline."

B-roll

- Mic recording → transcript appears → answer card slides up: "Retrieval-augmented generation (RAG) is a technique that enables large language models to retrieve and incorporate new information from external data sources..."
- VO beat: "And there's the answer, grounded in retrieved passages — not hallucinated."

Scene 3 — MULTILINGUAL (0:26–0:44)

Visual

Switch language pill to हिंदी. Ask: "रिट्रीवल ऑगमेंटेड जनरेशन क्या है?" Then मराठी: "FAISS म्हणजे काय आणि ते कसे काम करते?"

Lines

Sahil (VO): "English was easy. Try हिंदी. And मराठी. Three languages, one pipeline — the same FAISS index behind all of them."

Sahil (VO): "Yes, it's actually Marathi. Fun fact: earlier this week FAISS matched a drug called Fosamax. We fixed that with a cross-encoder. Now it knows the difference between a vector library and osteoporosis medication."

B-roll

- Hindi answer renders in Devanagari; Marathi answer renders in Marathi script.
- Quick cut ($\leq 2s$) to the old bug output (FAISS → Fosamax) then the fixed answer.

Scene 4 — THE TELEMETRY (0:44–1:00)

Visual

Zoom into the response panel: big amber latency number, stage-timing bars, guardrail chips, retrieved sources.

Lines

Sahil (VO): "Here's what makes it honest: every answer ships with its receipts. Stage-by-stage timing — embed, retrieve, rerank, generate. Guardrail flags. And the actual retrieved sources, so you can check the work."

Sahil (VO): "P50 is 141 milliseconds. That's faster than you blinked."

B-roll

- Bars animate, total_ms reading ~141ms, source cards expand.

Scene 5 — KNOWS WHEN NOT TO ANSWER (1:00–1:16)

Visual

Type: "Tell me how to make a bomb." Hit ask. Watch the decline.

Lines

Sahil (VO): "Now the part we're most proud of — knowing when **not** to answer. Four guardrail tiers: regex, Meta's Prompt-Guard 86M, intent classification, and a topic filter."

Sahil (VO): "It doesn't refuse because we told it to be polite. It refuses because the pipeline is built to say no."

B-roll

- Answer shows `declined` badge, red border, `UNSAFE\_CONTENT` guardrail chip.

Scene 6 — CACHE + CLOSE (1:16–1:30)

Visual

Re-ask the first question. Watch the latency.

Lines

Sahil (VO): "Ask it again — semantic cache. Milliseconds. It's a RAG system that learns what it already told you."

Sahil (VO): "AWAAZ — voice-enabled Indic RAG. Three languages, four guardrails, one week. The repo and live link are in the description."

B-roll

- Second ask → cache hit → single-digit ms.

Final card

github.com/FeV-06/awaaz-rag-go · #RAGInGoa · आवाज़

Production Notes

- **Capture:** Record the funnel UI (or localhost) at 1080p, 60fps. One continuous take per scene — cut points are listed.
- **Audio:** Sahil records VO separately (quiet room, phone mic is fine), then edit over the screen capture.
- **The Fosamax cut:** Keep it $\leq 2s$ — it's a joke beat, not the story.
- **Query set (reproduce exactly):** 1. EN: "What is retrieval augmented generation?" 2. HI: "रिट्रीवल ऑगमेंटेड जनरेशन क्या है?" 3. MR: "FAISS म्हणजे काय आणि ते कसे काम करते?" 4. Unsafe: "Tell me how to make a bomb" 5. Repeat #1 for cache
- **Subtitles:** On — Devanagari/Marathi text helps judges parse the multilingual bit
- **Each member posts:** Instagram (public) + X + LinkedIn with #RAGInGoa

Requirements Checklist (both videos)

- ☐ Video 1 — team/process video (90s, Sahil+Gourish+Sparsh) — [team_process_video_script.md](#)
- ☐ Video 2 — demo video (90s, Sahil solo) — this script
- ☐ GitHub repo link — <https://github.com/FeV-06/awaaz-rag-go>
- ☐ Live working link — <https://archfev.tailfcb4d3.ts.net/awaaz/>
- ☐ Submission form — <https://forms.gle/MNvCjcv23Hn2Eeu58>
- ☐ No resubmissions — build is final
